

Outline (1 Mark)

Introduction:

We must save energy because it is limited and not permanent .

Body:

Energy is mainly used in our life, so we have to protect us in various ways.

Paragraph (1)

Energy is very important in our daily life. We use energy like:

Petrol to power our cars.

We use electricity to power our home appliances.

Factories would stop working without energy we can diminish the use of energy in many ways.

Paragraph (2)

We can save energy at home turning off lights and appliances.

We can use solar power.,

Wave power and wind power can help to generate enough electricity.

We can diminish the amount of energy in our cars by using smaller cars.

We can share our cars.

Conclusion:

We should work hard to find alternative ways of using natural energy.

Can we save energy?

Energy is a reason for any country's advancement. There is no life without energy because we need it so badly, we need energy to make our food, to watch TV, to use the phone and also to move from one place to another.

How do we conserve energy? Energy is very important, we have to save it. Our electricity consumption must be rationalized. We must turn off lights and electrical appliances when we do not need them. We must take advantage of renewable sources like the sun, wind and waves because non-renewable energy sources like oil will one day run out. Therefore, we have to rely on renewable resources in our daily life. We can use the energy of water, wind and waves to generate electricity as well, we can use the sun to generate electricity or to heat water.

We must find clean energy sources so that we do not pollute our environment and protect the globe from pollution, so the electric car is now being developed into an environmentally friendly one. Natural gas is now used to power various modes of transportation because it does not pollute the environment.

We as human beings also have to maintain and spread awareness among us. The media has a great role in spreading awareness, so we must spread the problem and the recommended solutions among people. We should conduct awareness campaigns among people and also in schools, so that our children learn how to save energy and its necessity.

Finally, do not use up electricity, you badly need it.
