

Grade eight compositions

Social media

Social media has become a huge part of everyday life. In fact, some people are addicted to it. They spend most of their time using social media. They ignore people around them. They also become less social in real life.

However, social media has many benefits. It allows us to stay in touch with the world. It is great fun when you relax at home or take a break at work. Some people use it to raise money for charity. In my opinion, social media is very useful but we should use it the right way.

The advantages and the disadvantages of smart phones

Nearly everyone has a mobile phone. It is an amazing invention. It is very useful. It helps us to be in touch with the world. It helps us to surf the net. Really, it is very important in time of emergency.

On the other hand, some people are addicted to it. They use it most of the time. They ignore their social relations. Also, some studies suggest a link between frequent headache and smart phones. In my opinion, we should use them wisely to get the most benefit.

Your favorite smartphone application

Smartphones have many applications. YouTube application is my favorite application. It is an amazing application. There are many reasons why I like this application. I like watching videos about everything around the world. Also, I can follow many useful channels such as; educational channels.

YouTube is downloaded freely. I can get it easily from Appstore. For many young people, YouTube is used for watching music videos, comedy shows, and more. Teens also use the video-sharing service to follow their favorite video bloggers, subscribe to other YouTubers and celebrities they are interested in. I can create my own channel and share my videos to others. Really, YouTube is great application that I can share interests, ideas and hobbies.

Communication

Communication is very important to share ideas with others. It helps us convey information. It has improved over the years. In the past, people had to keep knowledge in their memories. Later, people learnt to carved and paint on stones. After writing was invented, people were able to write down everything they knew.

The invention of printing, telephone, radio, television and computer in the last century changed the way we communicate. Today's, technology has made communication faster and easier. However, we must remember to talk to people face to face because communication is more than just words.

Communication in the future

Technology plays a great role in developing all means of communication. In the future, there will be more changes. Communications will be faster and easier. We will use wearable technology. It will make your skin your touch screen. It will help you play games, answer your calls, and find your way on our arms.

Although the modern ways of communications are wonderful and fast. They don't carry emotions and feelings between people. Nowadays we miss the old ways of communications. It helped people in the past to exchange feelings and emotions. I hope we would bring back messenger as he could convey feelings and emotions between people.

Sending messages in the past and nowadays

Ways of sending messages in the past were different from ways of sending messages now. There were simple ways of sending messages in the past. People used fires to send messages. They used to send messages with messengers. People also sent messages by post and telegraph. Sending messages in the past wasn't easy and fast.

Nowadays people use modern inventions to send messages. They use mobile phones to send messages. People also send e-mails on the internet. They can talk face to face online. Sending messages has become easier. It is clear that ways of sending messages have changed.

Storytelling

Storytelling is a means of transmitting ideas from one person to another. It is a part of life, vital to most cultures. Stories are the most effective way to communicate messages. They increase interest and engage emotions. They help people understand the world.

People share stories since the beginning of time. Our ancestors gathered around the fire passing on their wisdom to the next generation through stories. Stories communicate values, not just skills. They help us to see the world from the eyes of others. They also help parents teach the children about life.

Modern inventions

We are in the age of science and technology. Modern inventions have made life more comfortable than before. We can find these inventions everywhere. We can watch TV to have fun and use the computer to get information. We can find fast cars and planes. We can use mobile phones and the internet to communicate with each other.

Modern inventions have become part of our lives now. But stop for a moment, and think how different life would be without them. I think, life would be hard and difficult. Finally, we should thank scientists who did their best to offer these inventions.

Creativity

Creativity is the ability to invent or imagine something new. Everyone is creative but some people act on their ideas while others don't. Creativity has two stages. They are thinking, then producing. If you have ideas, but don't act on them, you are imaginative but not creative.

There are many ways of being creative. They are evolution of ideas and putting ideas together. If you use your imagination and combine your knowledge with imagination you can be creative. Creativity is very important to find answers for difficult questions. It helps us solve our problems.

Astronomy

Astronomy is the study of stars, planets, and space. Humans have long gazed towards the sky, trying to understand the universe. In the past, it was difficult to study astronomy because people didn't have advanced technology. They also didn't have the equipment needed to study the universe.

Inventing the telescope helped us discover our universe solar system and galaxies. Most astronomy today is done by using remote telescopes controlled by computers. Thanks to modern technology, astronomers discover new things about the universe day after day. Since the beginning of digital photography, astronomers have provided us with amazing pictures of space.

How to save the environment

The environment is the important resource for life. It provides us with everything that we ever need. We get air, water, food, and everything else from the environment. However, it faces many problems. It faces problems like global warming, pollution, and cutting trees so it is important to save it.

People can help save the environment by many ways. We should save drinking water. We should reduce pollution. We should stop cutting trees. The natural resources are limited so we should use them wisely.

Good luck
