B-Reading Comprehension (16 marks)**The number of words [238]****Read the following passage carefully then answer the questions below:**

Twenty-five years ago, communication between people was very different from communication today. To call friends quickly, we used a telephone to ring them. If time was not important, we wrote a letter and sent it by post. For fast written communication, people sent faxes.

Although many people still use these ways of communication, they are becoming less **widespread** because of the new technology. Today, the most common forms of personal and business communication are mobile phone calls, text messages and e-mails. Many people now use smart phones with computers which can connect to the Internet and send e-mails.

In the future, the only thing that we can be sure of is that technology is not going to stand still. Scientists are going to continue inventing new, more complex ways of communication. Some experts predict that the next big development will be in visual communication. Small mobile computers with fast Internet connections will probably be the first mobile devices that give us high-quality visual communication, so that we can see the people we are talking to.

Further in the future, who knows what will happen? By the year 2023, scientists predict that we will be able to send text messages by the power of thought. A special helmet connected to our brain will turn what we are thinking of into a digital form enabling us to communicate to other people that we know.

a) Choose the correct answer from a, b, c and d: (6 x 2 =12 Ms)

9 - The best title for this passage could be:

- a- Digital Thinking
- b- Visual Communication
